Inter-office Memorandum The Department of Political Science The College of the Liberal Arts and Sciences University of Florida

Date: April 25, 2011

To: Faculty, Department of Political Science

From: The Strategic Planning Committee (Michael Bernhard, chair; Badredine Arfi; Sharon Austin;

Kenneth Wald)

Subject: Final Report 2010-2011

Introduction

The charge of the committee this year was to collect data in order to understand how we can better pursue the goal of making ourselves a top twenty public university political science department. In the initial stage, we planned to collect data on research productivity, research impact, graduate and undergraduate teaching productivity, and teaching impact.

With the publication of the National Research Council's Report on Doctoral Education and the announcement by the Provost's Office of the formation of a Task Force to study doctoral education at UF, we chose to refocus our efforts on studying the research component of the department's efforts, as well as the visibility of the department within the discipline. Given that productivity, graduate placement, and reputation are essential components of department rankings and evaluations and that the college was interested in having a better picture of the performance of doctoral programs in research and visibility, these areas became the focus of our study.

We thus collected and analyzed data on research productivity, research impact, graduate placement, and disciplinary service (the memo that we circulated to guide data collection is reproduced in the Annex to the report). We looked at our faculty's research productivity and impact in two ways. First we looked at our own trajectory longitudinally. Second, we compared our research productivity and impact to another large public university that was ranked higher than us in the recent NRC study. We also examined and evaluated the placement of our Ph.D. students over the last ten years. And finally, we surveyed the faculty on certain types of service activities that raise the public visibility of the department and thus contribute to our reputation.

Summary of the NRC Rankings

The NRC issues its report on graduate programs every five to ten years. The 2010 report included two different rankings of Ph.D. granting departments: 1) an "r-ranking" based on reputational assessment, and 2) an "s-ranking" based on a survey of what political scientists think makes a good program. On the r-ranking we received a score of 45-77 (5th percentile to 95th percentile) out of 105 ranked programs. In the s-rankings based on the criteria framed by the faculty survey, we did slightly worse, falling between 54 and 76. There are 62 universities with fifth percentile r-rankings higher than ours and 64 universities

with higher fifth percentile s-rankings. Apparently our reputation is slightly better than our performance. This report depicts us as a lower-middle ranked department.

On the r-rankings (5th percentile) we are ranked 37th among public universities and 17th in the South for all public and private institutions. So we are still short of our stated goal of being a top twenty public and a top ten southern department. If you put us in the context of public universities in the South, we fare a little better ninth out of 25 on the r-rankings (see Appendix A). We will treat public universities in the South as our comparison group for subsequent analysis.

The NRC rankings are divided into several component areas—research, graduate student support, and diversity. In our peer group of public universities in the South, we are ranked 11 out of 25 in terms of research. We are ranked 14 out of 25 in terms of student support. In diversity we were 11 out of 25. The good news on this is that our reputation is a little higher than our performance. The bad news is that it is hard to maintain reputation if performance lags for too long.

Research is judged on number of publications (14th), citations (13th), grants (5th), and honors (10th). It seems that grant activity is our best category and that the presence of the area centers helps us (not to denigrate the efforts of individual faculty members). We are weakest in terms of publications and citations. We believe part of this is attributable to the fact that many of us publish in books and the NRC rankings do not take these publications into account.

Student Services is judged on the percentage of first year graduate students with full support (16th), average percentage completion in six years or less (6th), median time to degree (6th), and percentage of students with academic plans (6th). Here we seem to be hurt by the fact that we fund only 50% of our first year students. Our assumption is that this includes the Master's programs. We would describe this situation as being caught in a vice between pressure from above for tuition and graduate student numbers (magnified under RCM) and the way the NRC rankings are constructed. We do not do badly on completion time. The actual percentage of students finishing under six years is only 32.1%, and the average time to completion is 5.67 years. On the face of it, these two statistics might seem mathematically impossible, but we think they are possible if one factors in uncompleted degrees. Given that many of our dissertations require fieldwork rather than relying on existing data sources, we think we are doing well here.

Diversity is judged on non-Asian minority faculty (19th, 3.4%), female faculty (7th, 26.7%), non-Asian minority graduate students (13th, 9.1%), female graduate students (13th, 39.8%), and foreign graduate students (16th, 18.4%). The only area where we are doing well here is in terms of female faculty and recent hiring will improve this even more. We need to take notice of the poor rankings in non-Asian minority faculty and graduate students and should formulate an action plan to improve this (though there seems to be some underreporting on the faculty side).

Several other measures play into these rankings, including the number of PhDs granted per year (7th), the percentage of interdisciplinary faculty (tied for last at 0%), GRE scores (13th, 615), percentage of first year graduate students with external funding (5th, 12.5%), and whether work space is provided for students (it is not). On these rankings we do relatively well. The weak rankings on interdisciplinary studies strikes us as odd given the number of faculty who are dual affiliated with centers and programs (African Studies, European Studies, Jewish Studies, Latin American Studies, Sustainability Studies, Woman's Studies). Perhaps we made errors here in terms of reporting or the measure misses this part

of our intellectual versatility. We believe that we should also study ways to provide more workspace and general resources (e.g. conference travel) for graduate students in the department.

Research productivity, on which we are below the disciplinary mean as measured in the NRC report, is clearly one of our weaknesses in this assessment. The disciplinary mean for articles is 0.30/capita/year and our score is 0.26/capita/year (min-max [0, 0.7]). The mean for citations is 0.63/article/year and ours is 0.51/article/year (min-max [0, 1.59]). The data for this report was collected in 2005-6. The committee found this depiction of the department to be out of touch with recent developments in research at UF Political Science and thus we made updating these figures and demonstrating our progress in this area a high priority. The next section of the report addresses research productivity of the department in greater detail.

Updating Research Productivity and Impact

Over the last decade the department was able to hire a substantial cohort of faculty, many of whom were beginning assistant professors. It was our conjecture that the growing research productivity of this group of faculty was not captured in the NRC study. We believed that UF Political Science is now a stronger department in terms of research productivity and impact. We thus replicated the NRC measures of research productivity and impact for the period 2005-2010.

To reiterate, the NRC report looked at research for the period 2000-2005. The disciplinary mean for research productivity (measured as articles in published in Social Science Citation Index journal per faculty member per year) was 0.30/capita/year and our score in the report was 0.26/capita/year (minmax [0, 0.7]). When we studied the same indicator for the period 2005-2010, our SSCI publications/capita/year had grown to .41. That is a 58 percent increase in five years. It also puts us substantially above the disciplinary mean for the previous reporting period.

The NRC report used citations/article/year as its measure of research impact. This was again compiled on the basis of SSCI indexed journals. The mean in the discipline for 2000-2005 for citations was 0.63/article/year and ours was 0.51/article/year (min-max [0, 1.59]). Again we show a strong upward trajectory since the last NRC report. This in demonstrated in the table one below.

Table One: Increasing Impact of UF Political Science's Research Output (2000-2010) (SSCI Journal Citations/per article/year)

2000-2005	0.51
2005	0.74
2006	0.71
2007	0.79
2008	0.85
2009	0.90
2010	0.97

The impact of our work is almost double in 2010 from what it was during the period of the NRC study. It represents an increase of 90 percent from that period. Again we are now well above the disciplinary mean of that earlier time.

Peer Institution Comparison

In order to understand how we are doing within the discipline, the committee conducted a study of how UF is doing compared to a somewhat higher ranked department with a similar profile. We chose the University of Virginia, another well-regarded public university with a large political science department in the South. Among public universities south of the Mason-Dixon Line Virginia ranks fifth (see Appendix 1). Its reputational ranking in the NRC (5th to 95th percentile) was 26-48 out of 105. That characterizes it as a middle ranked program but above the mean, with a reputational ranking substantially better than UF.

In our comparison to UVA we concentrated again on research productivity and research impact. We not only looked at the SSCI citations counts that were used by the NRC for the period 2005-2010, but developed a broader metric based on Google Scholar. Google Scholar has the advantage of counting books and their citation, as well as a somewhat broader selection of journals than SSCI (which takes into account well over 100 journals in political science). For the Google Scholar comparison we also tracked productivity and impact over the full range of career for both faculties. Table two looks at how the two the faculties stack up in terms of SSCI journals duplicating the NRC scores in the period 2005-2010.

Table Two: Comparison of SSCI Data UVA and UF, Department and Subfields (2005-2010)

Department American Comparative IR Theory

UVA	SSCI	Florid	a SSCI
Items	Cites/Item	Items	Cites/Item
0.32	4.22	0.47	5.32
0.36	6.24	0.51	7.24
0.3	2.13	0.52	5.96
0.35	5.77	0.46	2.91
0.22	1.14	0.17	1.07

In terms of SSCI journal publication and citations, UF has surpassed UVA in terms of productivity (gauged in items) and impact (cites per item) in the last half-decade. Across subfields this is a bit uneven. UF's American and Comparative politics subfields publish substantially more and are cited at higher rates than UVA's corresponding faculties. In IR UF has become more productive but its impact still trails behind UVA. The theory programs in both universities have very similar profiles, with UF lagging just a little.

The picture that emerges from a consideration of the Google Scholar Data is somewhat different (see table 3). Overall UF is the more productive department, with more published items per faculty member. However the number of citations per item is much higher for UVA. We believe that these numbers reflect that UVA includes a number of faculty members who have produced more influential books than our department.

Table Three: Comparison of Google Scholar Data for UVA and UF, 2005-2010

Department American Comparative IR Theory

UVA Google Scholar		Florida Goo	gle Scholar
Items	Cites/Item	Items	Cites/Item
0.78	2.10	1.12	0.82
0.80	2.28	1.41	0.56
0.73	3.25	1.08	1.46
0.75	1.38	0.94	0.56
0.90	0.57	0.53	0.36

The overall picture painted by both the longitudinal and peer institution comparisons indicates that UF political science is a department on an upward research trajectory. It shows substantial increases in both productivity and impact in a relatively short period and progress in creating a research profile that makes the attainment of the department's goals a realistic future prospect. In as much as reputation tends to lag productivity, we can be optimistic about the prospects for improvement in future NRC reports. These accomplishments however should not lead us to sit on our laurels and assume we can rest in our efforts to improve research productivity, publication placement, and impact.

Graduate Placement

The committee also collected data on what has happened to the cohort of graduate students trained in the last decade. In order to achieve our goals, we need to place our graduate students in tenure track positions in doctoral degree granting institutions. We have begun to take such steps, but in small numbers. Some of the best news in this regard is that two of these placements have been at programs that we presently consider peer institutions, University of South Carolina, and University of North Texas (numbers 8 and 13 in the NRC rankings (see Appendix A).

Table Four summarizes the job placement record for our PhDs for the last decade. A full 78 percent of our graduates are placed in the academic sector. Our rate of production of PhDs in this decade was also impressive, averaging over six per year.

Table 4: Post-graduate Job Placement of UF Political Science PhDs (2000-2010)

Sector	Number	Percentage
Academic	57	78.1
Non-Academic	12	16.4
Unknown	2	2.7
Unemployed	1	1.4
Deceased	1	1.4
Total	73	100

Table five summarizes the kinds of the placements we have made in the academic sector. A full 60 percent of our PhD graduates in the academic sector hold tenured or tenure-track faculty jobs (Assistant or Associate Professor, or Chair). Over time we would expect several others early in their careers who

have taken fixed term or one-year positions in short-term, hoping to secure tenure-line jobs in the future.

Table 5: Positions Held by UF Political Science PhDs in Academia (2000-2010)

Title	Number	Percentage
Adjunct	2	3.5
Assistant Professor	23	40.4
Associate Professor	11	19.3
Assistant VP	1	1.8
Chair	1	1.8
Director	1	1.8
Instructor, Lecturer	9	15.8
Limited Term Appointment	1	1.8
Research Fellow	1	1.8
Secretary of Development	1	1.8
Senior Lecturer	2	3.5
Visting Assistant	4	7.0
Total	57	100

Presence in the Discipline

Members of the department are extremely active in the life of political science as a discipline. Florida Political Scientists have held over thirty leadership positions in a number of professional organizations over the last decade (See Appendix B). Amie Kreppel has recently served as President of the European Union Studies Association and Ido Oren as Vice-President of the International Studies Association. Several members have been section heads in the American Political Science Association. We see a similarly high level of activity in Regional Professional Organizations (see Appendix C). Notable here is Larry Dodd's service as President of the Southern Political Science Association. Also important is the role that a number of faculty play on the program committees of national and international meetings (see Appendix D). The number of faculty on the program committee of the Annual Meeting of the American Political Science Association is indicative of the growing recognition of the department in the discipline.

Members of the department are increasingly active in publication service as well. Both Laura Sjoberg and Michael Scicchitano are presently journal editors (see Appendix E). There are also two influential professional newsletters housed in the department. A group of comparativists with interests in democratization this year launched *CD-APSA*, the newsletter of the Comparative Democratization Section of the American Political Science Association, and Amie Kreppel has edited *European Union Studies Review* for two years (see Appendix F). Four members of the department are also active editors of book series for presses (see Appendix G). Perhaps the most longstanding and influential has been Ken Wald's tenure of the "Religion, Politics, and Social Theory" series at Cambridge University Press. Finally eighteen different members of the department have been on the editorial boards of eighteen journals and presses over the course of the last decade (see Appendix H).

Conclusions

The department has come through an important decade in its development. There has been substantial progress in laying the foundations for reaching our stated goal of making ourselves a top twenty public university political science department. First, the second half of the decade saw rapid growth in the research productivity of the department as well as in the impact of that work. Second, for a program that had a small PhD program in the recent past, we are graduating a substantial number of students and placing a high percentage of them in tenure-track jobs. Most encouraging has been the placement of three of those students in peer institutions. This represents an important milestone in terms of the quality of students that we produce. Third, a high percentage of our faculty has been very visible in leadership positions in the discipline. Such visibility brings attention to the sorts of things we are doing right in terms of research and graduate training.

Despite this progress, the attainment of our goal is no certainty. We cannot rest on our laurels in terms of research productivity and impact. Five good years is not enough to firmly establish the academic reputation of a department. We need to continue to publish and seek to publish in increasingly more visible and influential journals and presses. We will also need to continue to improve graduate placement. Given the current budgetary situation and the lack of hiring by many universities, this means we must do an even better job in focusing on cultivating publication as a central facet of graduate training. Finally, the austerity in our own University is taking a toll. In particular, two key losses of faculty and the impossibility of hiring in these circumstances will impede our ability to make progress. The loss of one of our methodologists two years ago has put a substantial burden on the remaining methodologist and constrained us in our ability to offer advanced courses in methodology. The loss of one of our three political theorists while the two other theorists are discharging important administrative responsibilities has left us with .75 FTEs for both the undergraduate and graduate offerings in this field. Such a situation is not tenable in anything more than the short-term.

Data Collection Procedures Memorandum

Compiling Your Data for Strategic Planning

We want two different kinds of data from you.

- 1) A Social Science Citation Index Count (2005-2010 inclusive). About 45 minutes.
- 2) A Google Scholar citation using Publish or Perish (All authored books, articles, and chapters authored at any time). About 45 minutes.

Please follow the instructions carefully. If you do not provide the needed data, I may have to ask you to try again.

All materials should be submitted to Michael Bernhard (<u>bernhard@ufl.edu</u>) by Wednesday, November 24, 2010.

1) How to do a Social Science Citation Index Count?

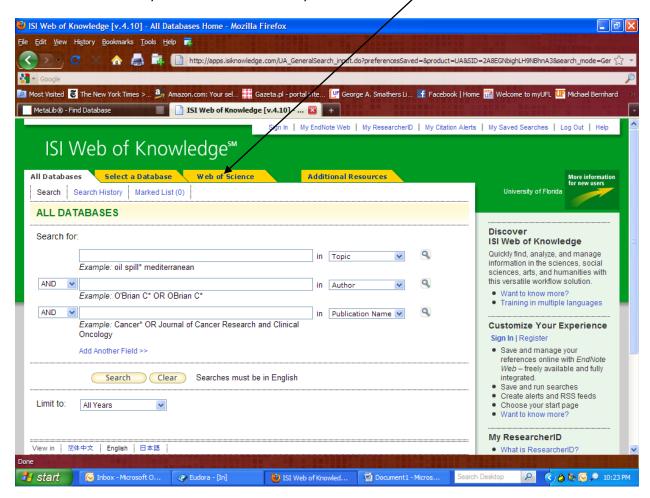

To do this you will need to be on campus or connected to the web remotely through gatorlink VPN (Virtual Private Network software, downloadable at: http://net-services.ufl.edu/provided_services/vpn/).

I am using myself as an example here. I am making my own data public because I will compile everybody else's. I will not share individual results with others.

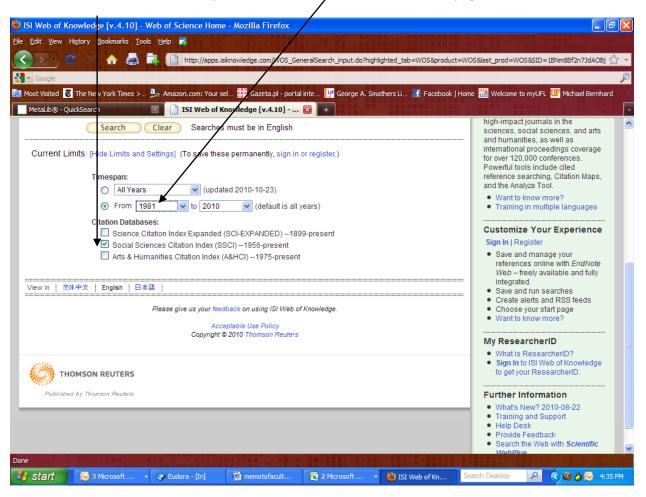

The URL for this is:

http://apps.isiknowledge.com/UA_GeneralSearch_input.do?preferencesSaved=&product=UA&SID=2A8_EGNbighLH9NBhnA3&search_mode=GeneralSearch&last_prod=WOS&highlighted_tab=UA&cacheurl=n_o_

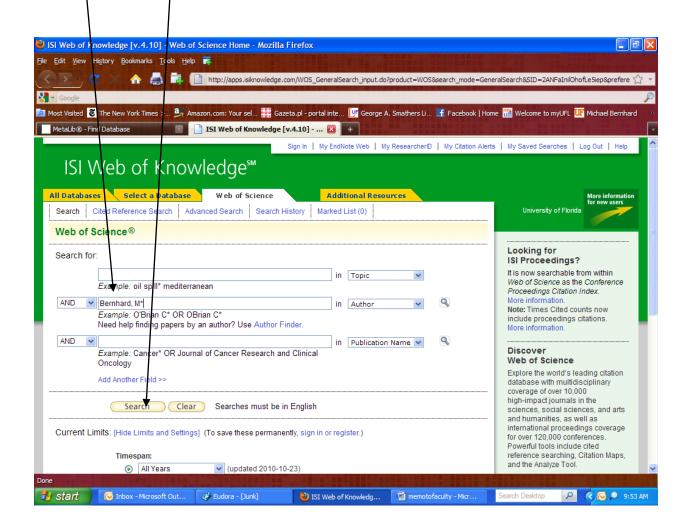

You should see this on your screen. Click on the yellow "Web of Science" tab.

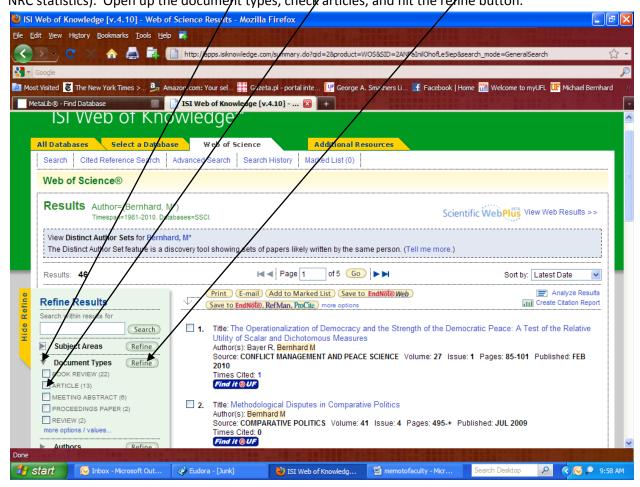

You will need to limit the search for publications since 1981 (not a problem for most of us) and limit the search to the SSCI as in the NRC report. Cursor down to the bottom of the page to find these.

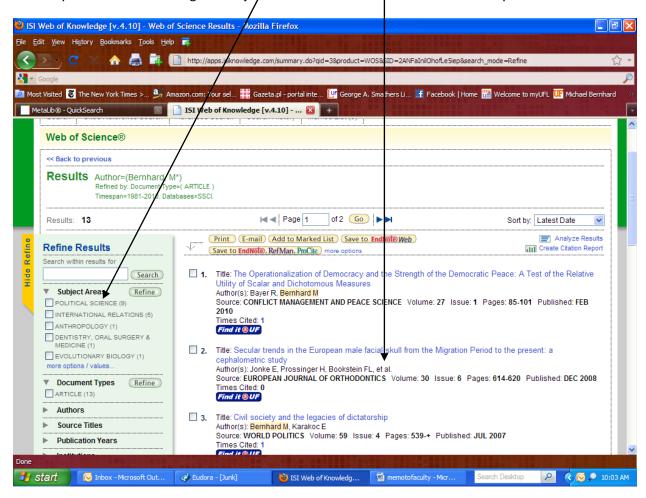

Insert your last name and your first initial followed by an asterisk (e.g. Bernhard, M*) into the author search pane and hit search.

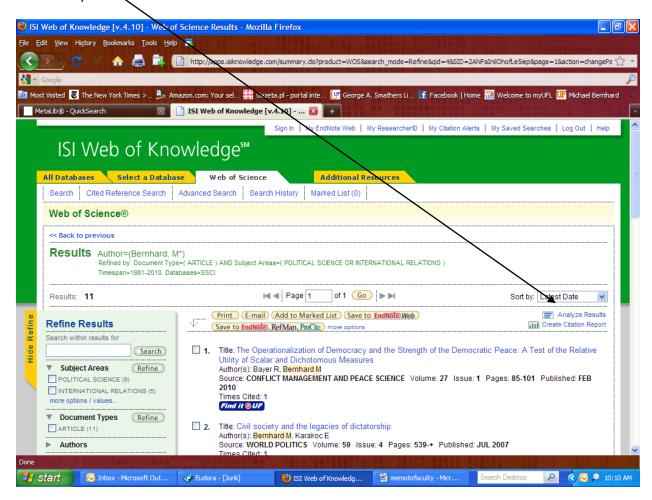

The screen you will see is likely to be reporting things other than articles authored by you or folks with similar names to you. The first step to pare this down is to restrict the items to articles (in line with the NRC statistics). Open up the document types, check articles, and hit the refine button.

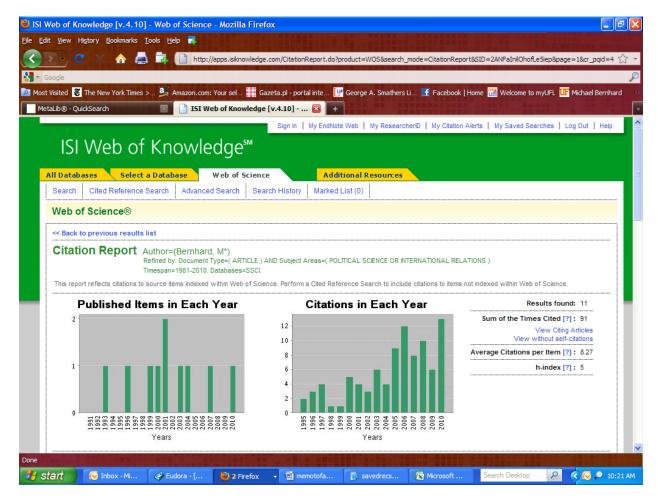

In my case this reduces the number of cited publications from 46 to 13 but this is still not quite right. There is, for instance in position two, an article I did not write. You should look through the pages and figure how many of the remaining articles are not yours. You can rid of these by refining according to field. For most of us, limiting the search to political science and international relations journals should do it. Try a second refine using the subject areas to weed out articles that are not yours.

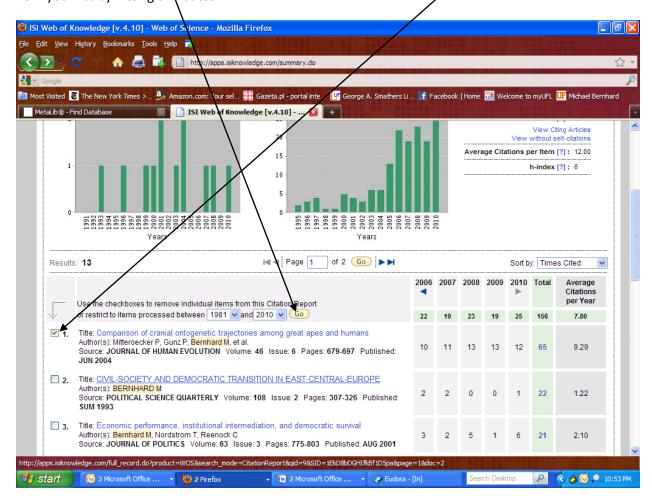

Doing that isolates eleven of my articles in the database. Once you have that hit the "create citation report" button. The database will not find articles that are not in SSCI indexed journals, and may occasionally miss other articles. We will check this.

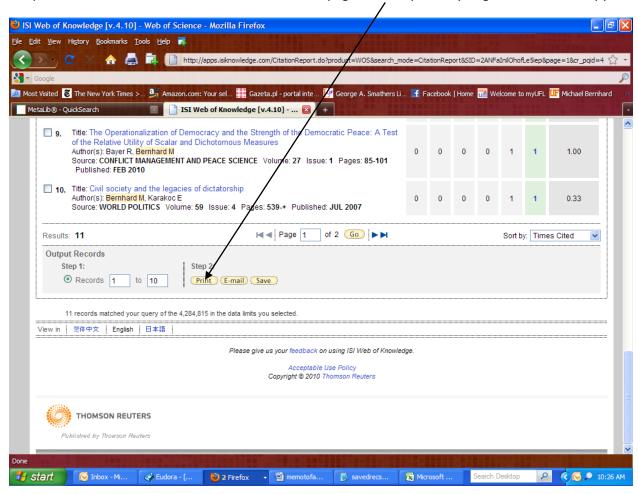

This will generate a citation report that looks like this. Look at publications and ascertain if anything you've written is omitted. I know I published two articles in 2007 and one is missing. I will have to do search for that one as a supplement (more on that later). You will need to print off all pages of this report and save a copy of the file so we can compile the department-wide data.

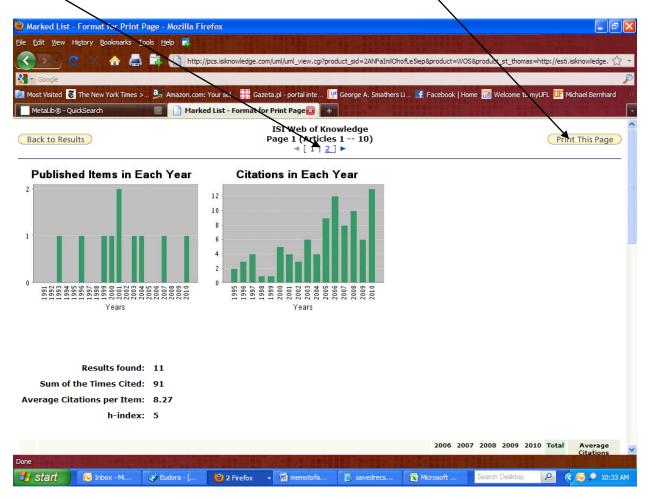

In some of testing of this, the narrowing of publications did not remove all inappropriate items. This page offers an ability to do this before generating your report. Tick the item (or items) and remove it from your list by hitting this button.

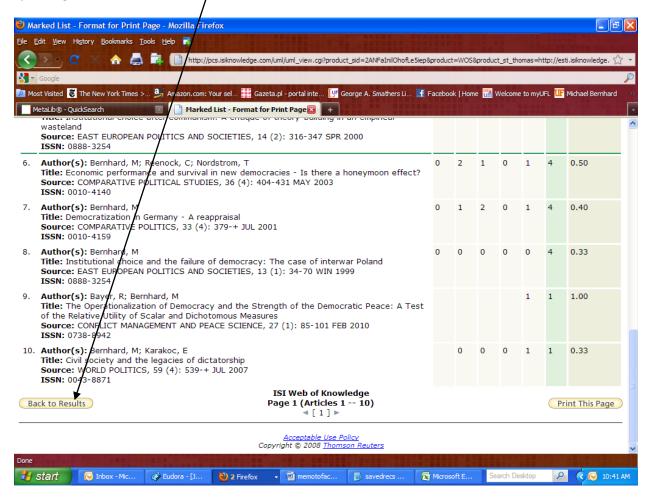

The print and save functions are at the bottom of the page. Hit the print key to generate a hard copy.

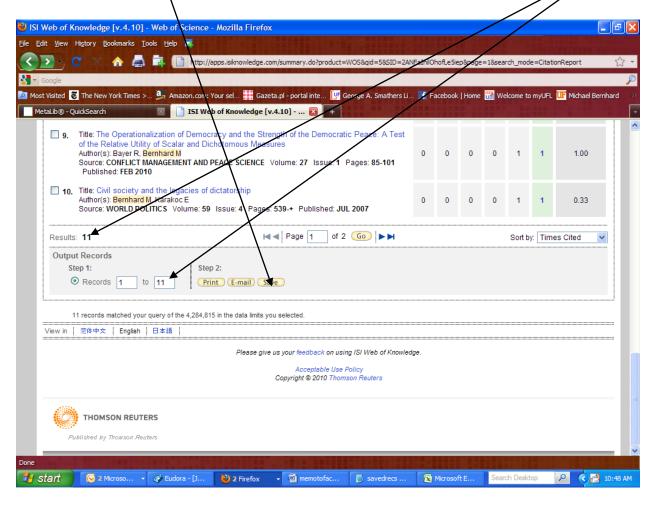

This will generate a document that looks like this. Hit the "print this page" key for all pages of your document.

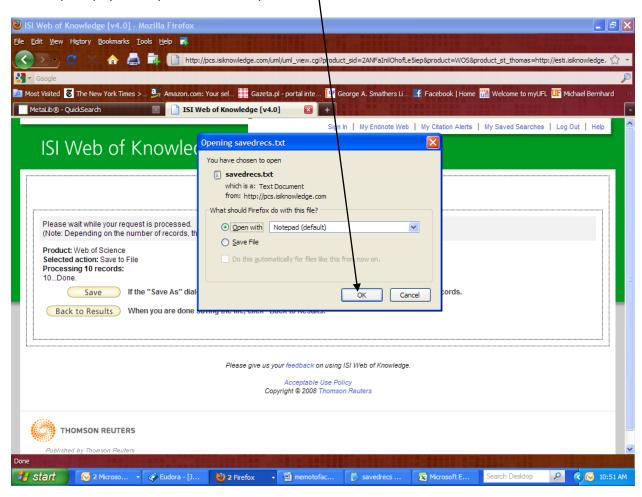

Once you have printed off the report, save a copy to hand in to the committee. Return to your results by hitting the button on the lower left.

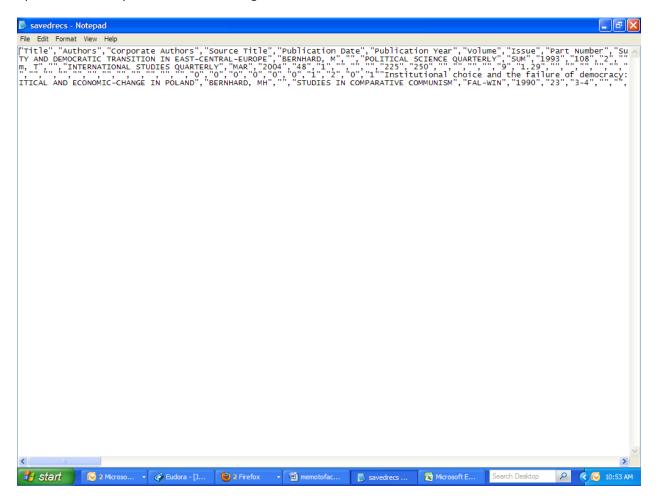

This will return you to the previous screen. Set your publication total to the number you have found in the search and save the results.

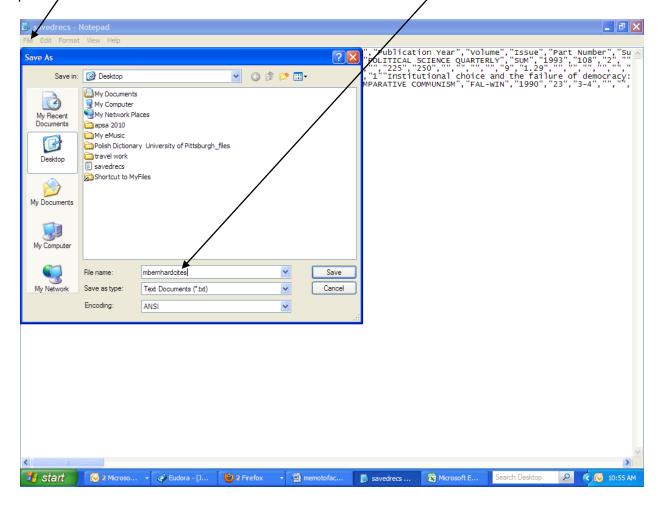

This will prompt you to open a file in notepad. Hit QK.

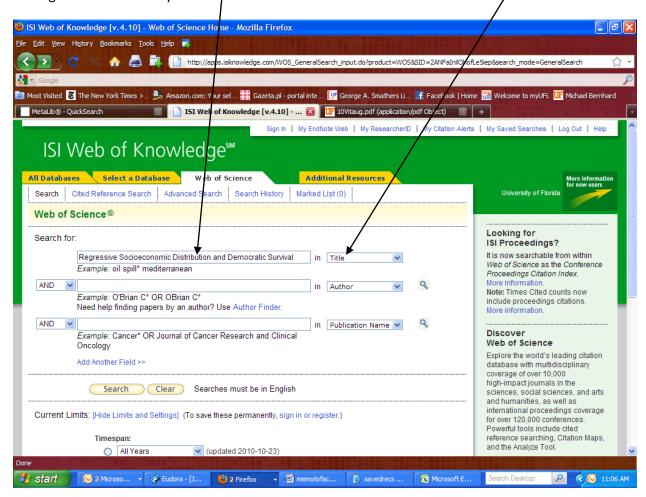

Open the file and you will see something like this.

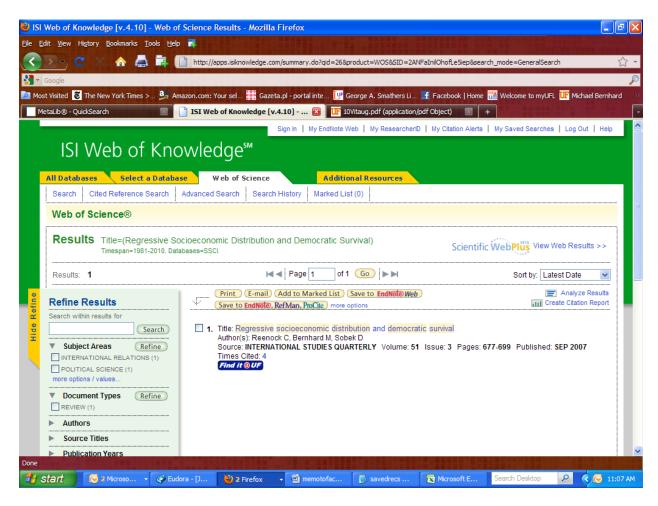

Use the "file" button "save as" command to rename the file with your first initial, last names, and cites. Email this file to bernhard@ufl.edu. I will be able to open this file in excel to calculate department publication and citation rates.

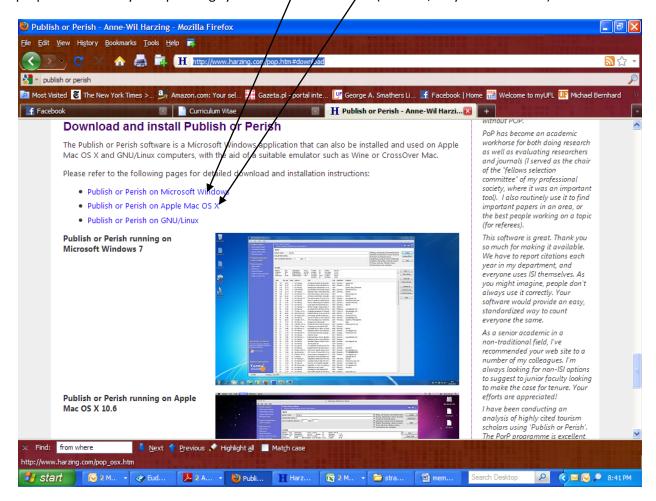

It is also important for us to make sure that all your articles are counted. In going through the list of eleven that the database produced for me, I noted one or two pieces that did not appear. This may be a function of SSCI's journal selection or other bugs in the database. Do an individual title search for any missing articles and see if you can locate it.

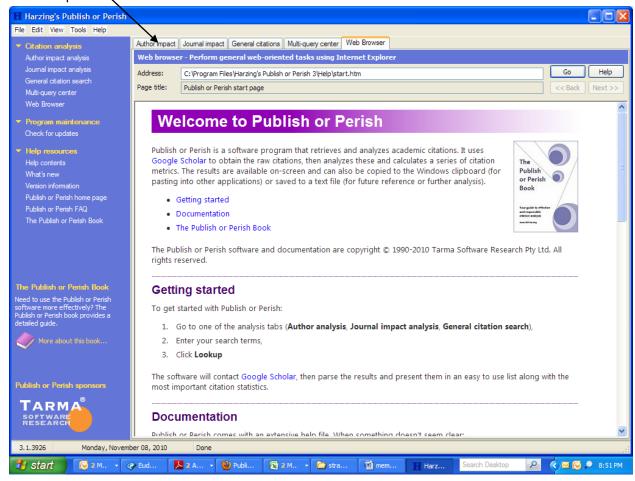

In my case this produced a recent article with four hits. If the piece that you found has citations between 2005 and 2010, print off an individual report on it, and save these in a supplementary file (e.g. "mbernhardcitessup1"). Include the supplemental report in your paper report and send this file to me as well.

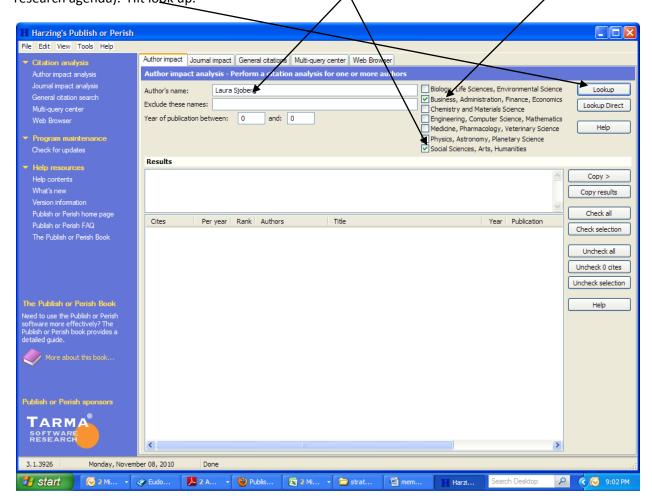

2) We also need you to compile your citations in Google Scholar using publish or perish freeware. You need to go to software download site (http://www.harzing.com/pop.htm#download) and download the proper version for your operating system. Windows or Mac (or Linux, maybe Badredine?)

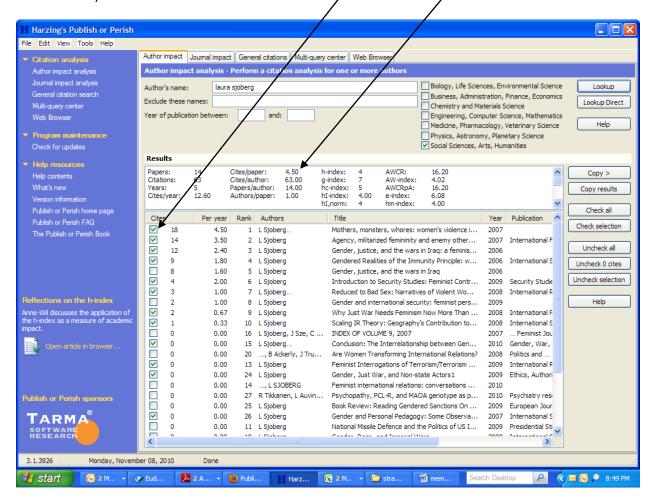

Once you have installed the software you should see a panel that looks like this. Please click on the author impact tab.

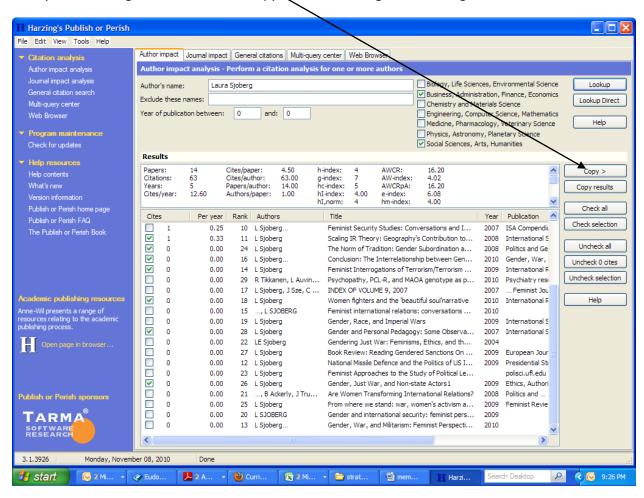

Laura gave me permission to use her for this search. Put your name in this window. Click the relevant disciplines. For some "Social Sciences, Arts, and Humanties" might be enough, for others "Business, Administration, Finance, and Economics" might help (folks with a public policy or political economy research agenda). Hit look up.

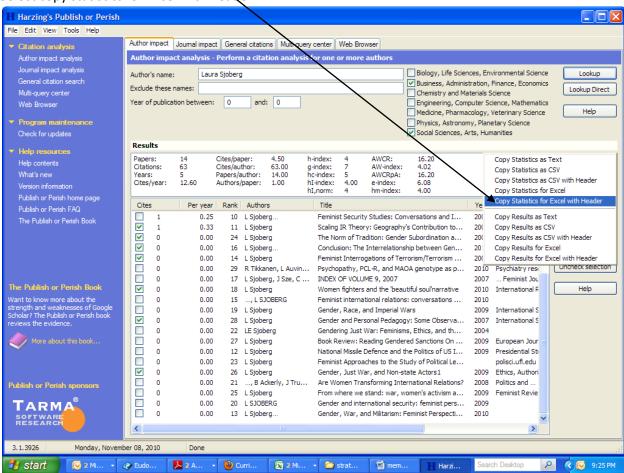

You will then get a screen that looks something like this with a whole lot of papers noted (this includes, books, chapters, and many other things). Work through this list and uncheck anything that is not yours, plus chuck out stuff like book reviews, lists of reviewers, newsletters, indexes. Only check books, articles, and authored chapters. You may find that some of your items are cited as more than one publication (my first book). Keep it in if it has more cites than your average cites per paper. If it is less than that figure, strike it because it will not help us in terms of the metrics that matter (cites/paper, cites per year, h-index). As you do that, the statistics at the top will start to change. Some recent stuff won't be cited yet (don't despair). I have a paper from 1999 that only has two cites (I am justified in despairing over that one).

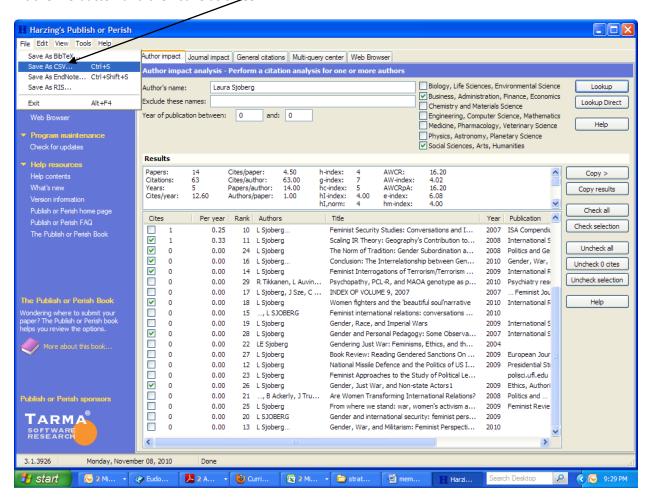

Once you have things sorted out hit the copy button on the right and it will generate a menu.

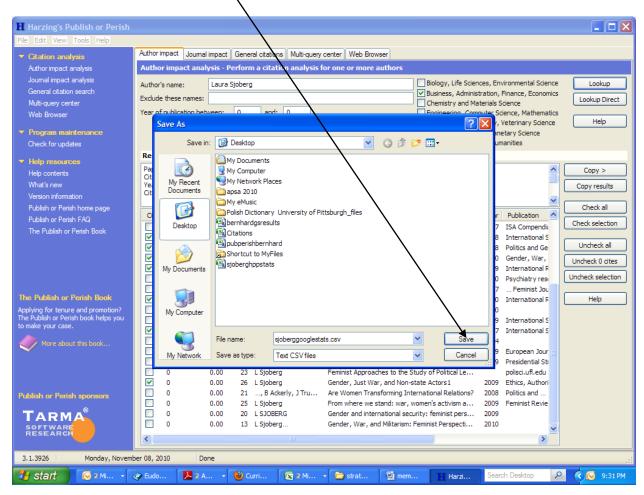

Select copy statistics for Excel with header.

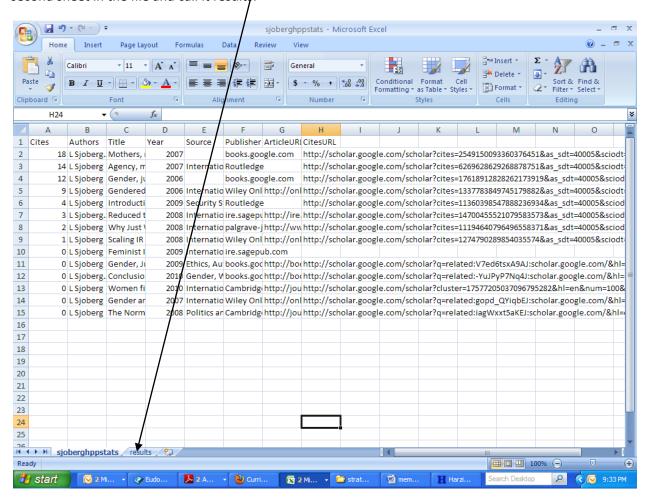

Hit the file button and then save as a "SSV"

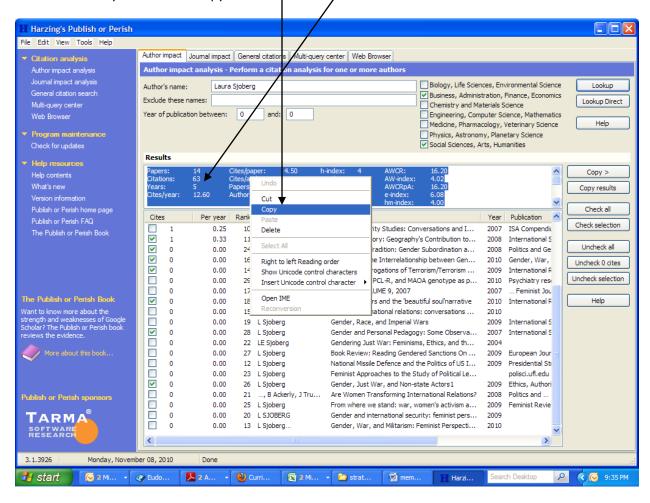

Save a file called (name)googlestats.csv

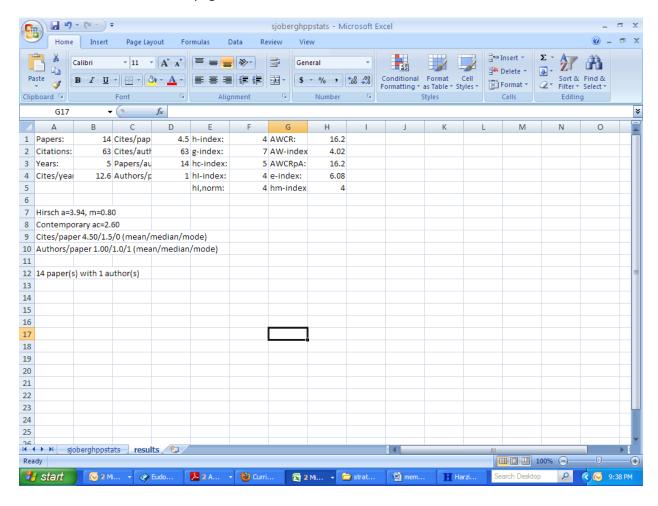

You will create a CSV file that will open in excel. It will look something like this. I need you to create second sheet in the file and call it results.

Go back to publish and perish. Put your cursor in the results panel and highlight all those stats by hitting cntrl-a on the keyboard. Then copy all that text.

Paste that data in the second page of the excel sheet. It will look like that.

Chec	klist for what you need to turn in.
a) SS	CI citations since 2005.
	☐ Hardcopy of citation report generated by SSCI (p. 14)
	txt file with citation report. Supplements if necessary. Email to bernhard@ufl.edu (p. 19, 21)
b) Go	ogle scholar citations.
	Hard copy of both sheets in the Excel spreadsheet generated by Publish or Perish. (p. 32, 34).
	Email the spreadsheet to <u>bernhard@ufl.edu</u>
c) A l	ist of published authored books, articles, and book chapters.
	Please separate them into the three categories listed above and order then from the most
